## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-17, drawn to an electronic circuit, classified in class 365, subclass 230.08.
- II. Claims 18-22, drawn to a method for performing photolithography, classified in class 355, subclass 77.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the method can utilize any circuit configuration able to apply and buffer a strobe signal. The subcombination has separate utility such as addressing circuitry for electrically addressed components other than that involving photolithography.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Holly Rudnick on 06/23/05 to request an oral election to the above restriction requirement, but did not result in an election being made.

Art Unit: 2873

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
